Wrap up - instructions

- Learned around 31 instructions not counting Jcc variations
- About half are just math or logic operations
- NOP
- PUSH/POP
- CALL/RET
- MOV/MOVZX/MOVSX/LEA
- ADD/SUB
- IMUL/DIV/IDIV
- JMP/Jcc (family)
- CMP/TEST
- AND/OR/XOR/NOT
- INC/DEC
- SHR/SHL/SAR/SAL
- REP STOS/REP MOVS
- LEAVE

Wrap up

- Learned about the basic hardware registers and how they're used
- Learned about how the stack is used
- Saw how C code translates to assembly
- Learned basic usage of compilers, disassemblers, and debuggers so that assembly can easily be explored
- Learned about Intel vs AT&T asm syntax
- Learned how to RTFM
- Learned that classes that claim to teach you hacking/RE in a couple days are selling the *illusion* of understanding. An illusion which soon fades.

The shape of things to come

- How does a system map a limited amount of physical memory to a seemingly unlimited amount of virtual memory?
- How does debugging actually work? How can malware detect your debugger and alter its behavior?
- How is “user space” actually separated from “kernel space”? I’ve heard there’s “rings”, but where are these fabled rings actually at?
- What if I want to talk to hardware beyond the CPU?

Intermediate x86 has it all!
